Information Sheet of J C BAND

Description

The J C Band are the rubber band developed and manufactured using polymers which are not rubber or latex. These may be called plastic rubber bands but we prefer to call them the **J C BAND**. Moreover these JC Bands can be recycled and reprocessed.

These JC Bands have unique & better properties over the conventional rubber bands.

1. **Temperature sensitivity:** The JC Band are far less temperature sensitive than the rubber bands and latex band. The conventional rubber bands tend to loosen up on the rise of temperature and tend to become brittle on decrease of temperature but the JC Band does not show this on temperature changes.
2. **Tolerance and resilience:** For a given size of rubber bands the JC Band comes nearer to its original shape upon release than the conventional rubber bands. This means that JC bands are more tolerant and resilient than the conventional rubber bands.
3. **Spotting and Cracking:** It is seen that the conventional rubber bands ooze oil and stick to the surfaces and crack with long exposure of time. But the JC Band does not ooze or crack in time.
4. **Weight of Bands:** The JC Band are lighter than the conventional rubber bands and have more strength. This means for a given size and weight the JC Band are more in number than the conventional rubber bands.
5. **Small Packing:** The JC Band is available in 500 gram pack each.

Bulk Packing

Available in 10 kg HDPE Bags [20 packs of 500 gram]
